

Subject: Panhematin® (hemin for Injection)

Dear Healthcare Professional,

Recordati Rare Diseases Canada Inc. is pleased to announce that PANHEMATIN (hemin for injection) is now available to order through Canadian Blood Services (CBS).

PANHEMATIN is indicated for the amelioration of recurrent attacks of acute intermittent porphyria (AIP) temporally related to the menstrual cycle in susceptible women, after initial carbohydrate therapy is known or suspected to be inadequate.

While new to CBS customers, PANHEMATIN has over 30 years of U.S. clinical experience.

The dose of PANHEMATIN is 0.8 to 3.1 mg/kg/day of hematin for 3 to 14 days based on the clinical signs. The standard dose in clinical practice is 2.3 to 3.1 mg/kg/day. In more severe cases this dose may be repeated no earlier than every 12 hours. Do not exceed 4.6 mg/kg of hematin in any 24 hour period. For more Information about PANHEMATIN, visit www.panhematin.ca (To access the website use password: **AIP**).

PANHEMATIN, 268 mg/vial, is formatted as a sterile, lyophilized powder for intravenous administration after reconstitution.

The dosage form available is:

Product	Vial size	DIN	Format
PANHEMATIN	268 mg	02478765	Carton 1 vial

Store PANHEMATIN lyophilized powder at 20-25°C (68-77°F). PANHEMATIN is stable until the expiry date indicated on the outer carton and vial label.

Please consult the PANHEMATIN Product Monograph at: <http://www.recordatirarediseases.com/sites/www.recordatirarediseases.com/files/inline-files/panhematin-product-monograph-ENG.pdf> for contraindications, warnings, precautions, adverse events, interactions, dosing and conditions of clinical use. The Product Monograph and more information about PANHEMATIN is also available by contacting Recordati Rare Diseases Canada Inc. at infocanada@recordati.com.

Sincerely,

Max Johnson
